## EDUCATION

---

**PhD.** Indian Institute of Space Science and Technology, [2012 – 2018]

**Research Area:** Complex networks, computer networks, and communication networks

**Thesis:** On the evolution of finite sized complex networks

**Advisor:** Prof. B. S. Manoj

**ME Electronics and Communication Engineering.** Birla Institute of Technology Mesra, [2010 – 2012]

**Specialization:** Wireless Communication

**Thesis:** Capacity enhancement in indoor wireless communication systems

**Advisor:** Dr. Sanjay Kumar

**BTech Electronics and Communication Engineering.** Maulana Abul Kalam Azad University of Technology [Formerly West Bengal University of Technology], [2003 – 2007]

**Institute:** College of Engineering & Management, Kolaghat

**Project:** Design and development of code for radiation pattern measurement of microstrip antenna

**Advisor:** Dr. Debendra Kumar Panda

## PROFESSIONAL EXPERIENCES

---

### *Post-PhD Experience*

**Indian Institute of Technology Madras Institute Post Doctoral Fellow, [Aug. 2018 – Present]**  
Department of Computer Science and Engineering, Indian Institute of Technology Madras

**Senior Project Fellow, [May 2018 – Aug. 2018]**

Department of Avionics, Indian Institute of Space Science and Technology and Indian Space Research Organization

### *Pre-PhD Experience*

**Senior Project Fellow, [Aug. 2017 – May 2018]**

Department of Avionics, Indian Institute of Space Science and Technology

**Teaching Assistant, [Aug. 2012 – Jul. 2017]**

Department of Avionics, Indian Institute of Space Science and Technology

- ◊ Digital Communication Laboratory (AV332).
- ◊ Computer Networks Laboratory (AV341).
- ◊ Wireless Mesh Networks Course (AV484).

**Teaching Assistant, [Aug. 2011 – Jun. 2012]**

Department of Electronics and Communication Engineering, Birla Institute of Technology Mesra

- ◊ Digital Electronics Laboratory (EC4102).
- ◊ Wireless Communication and Networking Laboratory (EC7102).

**Programmer Analyst, [Dec. 2007 – Jul. 2009]**

Cognizant Inc., Kolkata, India

**Industrial Training, [Jun. 2006 – Jul. 2006]**

Netaji Subhas Chandra Bose Telecom Training Centre, Kalyani, India

**Industrial Training, [Jun. 2005 – Jul. 2005]**

Bharat Sanchar Nigam Limited, Siliguri Zone, India

## PROFESSIONAL RESEARCH EXPERIENCE

---

**Institute Post Doctoral Fellow.** Indian Institute of Technology Madras, [Aug. 2018 – Present]

**Project:** Architecture and Protocol Solutions to Enhance the QoS of Next-Generation Wireless Networks: A Complex Network Analysis-based Approach

We are working towards the development of new architecture and protocol solutions to enhance the quality of services (QoS) when next-generation wireless networks are concerned. In particular, we analyze existing network topologies with the help of complex network analysis in order to (i) deploy high sensor nodes in random topology sparse M2M networks and (ii) efficiently place network virtual functions in underlay substrate networks to fulfill various service function chaining is concerned. Our proposed solutions satisfy diverse network-related stringent requirements in the context of the upcoming 5G network specifications.

Further, in present day social network, we observe multiple social groups consisting of many users who share numerous data and information. These social applications are designed in such a way that all the messages, from a social group, are first transmitted to the main social application server which sends the information all the way back to other users in the social group. Due to the transmission of same data, there is a redundant usage of a large amount of bandwidth and it also leads to increased latency in the network. However, the redundant utilization of bandwidth can be avoided by placing a few edge servers at the underlay physical base stations. We propose a novel edge server placement strategy which uses information from overlay social networks to efficiently identify influential base stations in order to place a few edge servers, in an existing 4G LTE network. The proposed solution improves the end-to-end transmission delay and the system throughput when broadcasting information in a social network group is concerned.

**Senior Project Fellow.** Indian Institute of Space Science and Technology, [Aug. 2017 – Aug. 2018]

**Project:** Research and Development of an Integrated Enterprise Network Security System

We worked on designing a novel distributed Integrated Enterprise Network Security System (IENSS) framework considering different elements of a typical enterprise network system. In particular, a novel API call transition matrix (API-CTM)-based detection technique was developed, using complex network analysis, that efficiently detects malware attacks on the basis of runtime behavior. With API-CTM recent threats such as polymorphic and metamorphic malware, which are difficult to identify with existing detection techniques (e.g., signature based detection), can be efficiently detected. The proposed complex network-based malware detection technique can find applications in designing real-time malware detection when an enterprise network security system is concerned.

## ACADEMIC RESEARCH EXPERIENCES

---

**PhD Thesis.** Indian Institute of Space Science and Technology, [Aug. 2012 – May 2018]

**Title:** On the evolution of finite sized complex networks

Any complex physical system, man-made or natural, consists of entities each of which interacts with other entities in the system. Such complex systems can be modeled as network graphs where the entities are nodes and their interactions are edges of the network graph. Earlier studies reported the possible mechanisms for the evolution of complex networks where size of the network is growing, in the context of nodes and edges, with time. However, the characteristics of finite sized complex systems, which can be seen in many real-world networks are not studied in depth.

This thesis aimed to study the characteristics behind the evolution of finite sized complex networks which can be seen in many real-world networks such as relationships in community networks, transportation networks, computer networks, and wireless sensor networks, to name a few. Here, *finite sized networks* mean that such complex physical systems are not growing in size when total number of nodes is concerned. We found that one of the key reasons behind many complex network formations is greedy optimal/near-optimal decision based optimization of certain network parameters such as minimizing average path length. We also applied our observations from finite sized complex networks to

design efficient, when reducing end-to-end transmission delay as well as enhancing average network flow capacity are concerned, finite sized real-world networks.

**ME Thesis.** Birla Institute of Technology Mesra, [Jun. 2011 – May 2012]

**Title:** Capacity enhancement in indoor wireless communication systems

We analytically derived the closed-form expressions of the system capacity in the context of single cell and multiple adjacent cells wireless indoor environments. The closed-form expressions also considered the optimal power constraints into account for better evaluation of the network system capacity. To further improve the system capacity, singular value decomposition technique was also incorporated to introduce space as another degree of freedom.

**BTech Project.** Maulana Abul Kalam Azad University of Technology [Formerly West Bengal University of Technology], [Jan. 2007 – Apr. 2007]

**Title:** Design and development of code for radiation pattern measurement of microstrip antenna

We developed a Matlab based simulator to visualize the E-plane and H-plane radiation patterns, at a given frequency, in the context of cavity model of the microstrip antenna. The length and width optimizations were also taken into consideration while designing the algorithm. Our algorithm is an approximation model which compares well with the IE3D based simulation model.

## LIST OF PUBLICATIONS (PUBLISHED/ACCEPTED)

### ◇ Book

- B1 B. S. Manoj, **Abhishek Chakraborty**, and Rahul Singh, “Complex Networks: A Networking and Signal Processing Perspective,” Prentice Hall PTR, New Jersey, USA, February 2018.

### ◇ Book Chapter

- BC1 P. Singh, **A. Chakraborty**, and B. S. Manoj, “Complex network entropy,” Chapter in the book titled “Soft Computing Applications in Sensor Networks,” Edited by Sankar K. Pal and Sudip Misra, pp. 243-263, CRC Press (USA), August 2016.

## RESEARCH INTERESTS

---

- ◇ Network Science
- ◇ Complex Networks
- ◇ Algorithms for Complex Networks
- ◇ Communication Networks
- ◇ Wireless Mesh Networks
- ◇ Wireless Sensor Networks
- ◇ Future Wireless Network Design
- ◇ Softwarized 5G Networks

## SKILLS

---

**Programming:** MATLAB, Python, and Network Simulator 2

**Data Visualization Tools:** Gephi and Pajek

**Language:** Bengali (native), English (fluent), and Hindi (fluent)

## AWARDS & RECOGNITIONS

---

- ◇ Selected for SERB National Post Doctoral Fellowship (SERB N-PDF) 2018 in Engineering Sciences under SERB, DST, GoI (File Number: PDF/2018/003828).
- ◇ Recipient of the Institute Post Doctoral Fellowship at Indian Institute of Technology Madras from August 2018 to Present.
- ◇ Recipient of the Springer Best Student Paper Award for the research paper titled “Graph Fourier transform based on directed Laplacian” at the 2016 11<sup>th</sup> International Conference on Signal Processing and Communications (SPCOM 2016), IISc Bangalore, India, June 2016.
- ◇ Recipient of the IIST Scholarship (Sponsored by Department of Space, GoI) from August 2012 to July 2017.
- ◇ Recipient of the Student Travel Grant to attend ACM MobiHoc 2013, Bangalore, India, from July 29, 2013 to August 01, 2013.
- ◇ Recipient of the MHRD Scholarship (Sponsored by MHRD, GoI) from July 2010 to May 2012.
- ◇ Qualified GATE (**G**raduate **A**ptitude **T**est in **E**ngineering, All India Entrance examination to Master’s program, conducted by MHRD, GoI) Examination, 2010 with 94.13 Percentile.

## PROFESSIONAL AFFILIATIONS/ACTIVITIES

---

- ◇ Member, IEEE
- ◇ Member, ACM
- ◇ Member, IEEE Communications Society
- ◇ Chair, IEEE Student Branch at Indian Institute of Space Science and Technology [2012–2013]
- ◇ Student Member of the International Conference of Devices and Communication (ICDeCom) at Birla Institute of Technology Mesra [2011]

◇ Reviewer of the following International Journals:

- IEEE Transactions on Communications
- IEEE Sensors Journal
- IEEE Communications Letters
- IEEE Networking Letters
- Elsevier Computer Networks
- Elsevier Physics Letters A
- Elsevier Physica A: Statistical Mechanics and its Applications

◇ Reviewer of the following International Conferences:

- IEEE WCNC 2020
- NCC 2020
- CoCoNet 2019
- IEEE GHTC-SAS 2013
- IEEE RAICS 2013, 2015, 2018
